<b>Zolpidem</b>	200	40
<b>Propoxyphene</b>	200	40
<b>Fentanyl</b>	100	20

*All other drug classes will remain unchanged.*

*\*\* 10 panel - 18 panel only*

As a reminder, we have made the previously indicated minor adjustments to some of our Hair Test Cutoff Levels. These changes take effect 1/6/2025.

We have also added a new methodology for screening our enhanced H10P-H18P panels. The laboratory now has the capability to utilize an ELISA method for these panels that can improve turnaround time. All tests will continue to be confirmed using Mass Spectrometry. As always, the specific screening, confirmation methods and cutoff levels utilized for a specific sample are always noted on the sample result reports.
